

# Fiberglass Trench Covers

When quality and safety matter, we've got you covered.

» Pedestrian and H-20 rated covers available in standard & custom sizes

Eliminate the hassle of handling awkward covers made from concrete or steel.

Choose fiberglass trench covers.

Throughout the world, fiberglass trench covers are quickly replacing rotted-out wood covers, crumbling concrete, and warped steel. When you choose our fiberglass trench covers, you're choosing a quality, lightweight product that will withstand the test of time.

Test results available by request. Give us a call today and let's get started: 253.884.4008.

## EASY INSTALLATION

With many sizes already in stock, along with our ability to handle virtually any custom work you need, your covers will fit securely on or in the trench. We keep things simple: send us your site drawing and we'll send you a quote.

## RESISTANT TO THE ELEMENTS

The high-quality raw materials we use during fabrication ensure your new trench covers are UV-resistant, non-conductive, and able to tolerate extreme temperatures. Steel will warp and rust, wood will rot, and concrete will crack and crumble. Avoid the hassle and expense of reinstalling lids in a few years - choose virtually indestructible fiberglass.

## SAFETY MATTERS

Our fiberglass trench covers are non-conductive. With no need for grounding, you save valuable resources. Job site safety remains a priority with our non-skid surface and light weight. Reduce workplace injuries and manpower requirements. Choose quality - choose safety.

## MULTIPLE STYLES AVAILABLE

We manufacture pedestrian rated trench covers to either fit over the top of your trench, or to drop into the trench and rest on the built-in ledge. Our H-20 rated trench covers are designed to drop into the trench providing a smooth ground transition for traffic.

Over-the-Top Covers

Drop-In Covers

## CUSTOM SIZES AVAILABLE

These are only a few examples of our standard size covers. Inquire about additional sizes and custom covers.
